

NEW! IMPROVED FORMULA

With pride Plagron introduces the second generation Green Sensation. The formula has been improved which means a lot of advantages in comparison with the first generation.

The new Green Sensation is less thick, and therefore easier to use and easier to dilute. The concentration remains extremely high with a 1:1000 ratio. So 1 liter of Green Sensation can be used to make 1000 liters nutrient solution.

The grow method and the use aren't changed. It's even possible to mix the old and the new Green Sensation and use them together. Green Sensation is still usable on all substrates (soil, coco, rock-wool, mapito, Eurofoam, etc.) and with all kinds of watering systems (NFT, tide systems, drippers, etc.).

THE ADVANTAGES OF THE NEW GENERATION GREEN SENSATION:

- ✓ Faster absorption by the plant, resulting in higher yields in the same time
- ✓ Higher nutrition value and therefore more savings on your basic nutrients
- ✓ Less ballast, so less pollution of your substrate
- ✓ Faster and easier mixing, so easier to use
- ✓ Less thick, so easier to dilute

SO CONVINCED YOURSELF AND EXPERIENCE THE SUCCESS OF THE 2ND GENERATION GREEN SENSATION.

NOW EVERYWHERE AVAILABLE!
